

Ultra Compact Reversing/Proportional Fan Drive Motor

Turola has over many years built up a wealth of experience with electrohydraulic Fan Drive systems. Vehicle designers require compact and integrated solutions for flexible mounting of the cooling system.

The new Fan Drive Motor provides proportional speed control with reversing capability in an ultra-compact package size.

Design

The Ultra Compact Reversing/Proportional Fan Drive Motor is designed for fan drive systems requiring proportional speed control with reversing capability in an ultra-compact package size.

- Unique design minimizes axial length
- Cartridge valves optimized for fan drive applications minimize pressure drop and offer greater power savings
- Pressure capability up to 210 bar (3045 PSI)
- Speeds up to 3500 rpm
- Intermittent fluid temperature up to 110°C [230°F] with a minimum viscosity of 10 mm²/s [60 SUS]

The design integrates the following features:

- High performance, pressure balanced aluminum gear motor
- Integrated dust cover to protect the shaft seal
- Durable aluminum casting optimized to provide short length and minimize weight
- Proportional pressure relief valve to modulate fan speed
- Direct acting cartridge valve to reverse motor rotation
- Anti-cavitation valves to bypass flow during fan wind down
- Deutsch connector DT 04 (IP69K) and optional DIN 43650 connector
- PLUS +1™ Compliant
